

## BroadWorks Assistant–Enterprise

The BroadWorks Assistant – Enterprise is an integrated toolbar that enables users to make and accept telephone calls, and change telephone settings, from within Microsoft Outlook and Internet Explorer. The BroadWorks Assistant is a carrier class, lightweight desktop communications product for everyday users of Internet Explorer and Microsoft Outlook.

### BroadWorks Assistant – Enterprise Overview

The BroadWorks Assistant – Enterprise is a feature-rich desktop toolbar, with user controls to access voice services efficiently, that is fully integrated with the BroadWorks platform. The toolbar delivers the following features and benefits to users:

- Microsoft Outlook edition has key integration features and outbound click-to-dial from Outlook contacts
- Suitable for corporate, SOHO, and high-end residential users
- User help functions available during any operation with HTML user manual built into the applications
- Internet Explorer edition allows users to highlight web page number and right-click to dial
- Call notifications with caller identification from BroadWorks and Microsoft Outlook directories
- Basic call control (answer or soft pickup, end, transfer to voicemail)

- Add Microsoft Outlook contact vCards for new incoming callers
- Easily change telephony service settings such as Call Forward All, Call Forward No Answer, Call Forward Busy, Do Not Disturb, and Remote Office
- View group and personal directories
- View Call History

The BroadWorks Assistant - Enterprise offers the following significant benefits to carriers:

- 'Heavyweight' functionality in a lightweight application
- Reduced need for desktop support when compared to standard desktop applications
- The ability to sell value added or premium services within the same application framework
- Full interoperability with the BroadWorks platform

### KEY BENEFITS

- **Intuitive Look and Feel:** With BroadWorks Assistant – Enterprise the possibilities of IP telephony are far more accessible via its intuitive look and feel, its single interface, and its support for additional application skins.
- **Basic Call Control:** BroadWorks Assistant – Enterprise boasts an extremely user friendly interface that makes call management a breeze.
- **Caller Identification:** BroadWorks Assistant – Enterprise checks an incoming number against your Microsoft Outlook and BroadWorks Group Directory contacts so that you know who is calling and can more effectively manage the calls you take.
- **Call History:** BroadWorks Assistant – Enterprise keeps a record of calls missed, received and dialed so that you have a record of recent communications activity.
- **Basic Branding:** As a fully integrated toolbar, BroadWorks Assistant – Enterprise allows you to change a few icons and colors to allow service providers to achieve simple but effective product branding.
- **Services Integration:** Make and change all your telephone settings within BroadWorks Assistant – Enterprise through easy to use configuration screens, without leaving your desktop applications.
- **Simple Maintenance:** BroadWorks Assistant – Enterprise employs the latest technology to keep users up-to-date with new releases. The silent upgrade procedure includes support for HTTP/SOCKS 4/5 proxies, and can be customized by providers.
- **Assured Reliability:** BroadWorks Assistant's design and network architecture ensures excellent reliability. The telephony controls are abstracted from the core of the communications network.

## BroadWorks Assistant – Enterprise Key Features

---

- **Caller ID:** identification of calling party for incoming calls only
- **Callee ID:** identification of called party for outgoing calls only
- **Call Control – Dial:** dial a number and BroadWorks Assistant – Enterprise will also auto-answer local alerting calls
- **Call Control – Answer:** soft-pickup inbound calls using toast notification
- **Call Control – Transfer to Voicemail:** divert incoming calls to voicemail (using the pop-up toast feature) when it is inconvenient to answer.
- **Call Control – Click-to-Dial:** dial phone numbers from within a web page/browser or from directories
